

Sprint retrospective - 5

What went well in the sprint?

This sprint we completed a total of 4 user stories including 1 from the backlog. Both subteams have worked really hard this sprint and with good communication we contributed to a good workflow and focused on getting the tasks done. We also made good use of the DoD in making sure that we finished the tasks.

What could be improved?

Increased communication between the two subgroups in our team in order to make merging easier by keeping track of major changes to code files that can change the programs behavior

Making sure that at least some documentation is in place before committing.

What we will commit to improve in the next sprint?

We will try to make the map a simple map by removing unnecessary icons from the map, such as business, restaurants etc and only show the parking icons. Better documentation for future developers and also for stakeholders.
